

INFORMATION PROCESSING ALGORITHM

START

UNIVERSE OF INFORMATION

This algorithm may be used to organize and refine raw information derived from quantitative and/or subjective sources of facts and opinions that are successively filtered downward, from top to bottom, and validated, in sequence, from left to right, before being combined and applied to a disciplined, decision making process.

It is neither a mathematical computation or calculation but may be thought of as an information deduction funnel that can apply reliability and relevance to various sources of information in sequences that are intended to help make decisions based on data that is refined and considered both reliable and material.
